

How to Configure Zoom to Feed Recorded Sessions to Kaltura MyMedia

You can add your Kaltura User ID to your Zoom account so that the recordings created with Zoom feed into Kaltura MyMedia without doing a separate upload. You do not have to download videos from your Zoom Cloud Recordings. This is an easy way for instructors to store all their video recordings within MyMedia and to use them in Canvas via the Kaltura link in the Rich Content Editor.

First, log into Canvas and click on My Media from a course. If you have not used your My Media before, you'll see this message:

Please choose Authorize.

Next go to your [profile page](#) in the Zoom settings menu. (<https://zoom.us/profile>) Click the edit button associated with the Kaltura User ID and enter your scc id email address and Save. Be sure to use the initials and numbers with @southeast.edu as your user ID, e.g., [ab1234@southeast.edu](#). If you use the incorrect information, you will see an error.

The Kaltura User Id is not correct.

Once you have successfully entered your SCC username, you will see it listed after Kaltura User ID at the bottom of your profile page

Host Key	***** Show	Edit
Two-factor Authentication	Turned off	Turn on
Signed-In Device	Sign Me Out From All Devices 	
Kaltura User Id	miv-?@southeast.edu	Edit
